

DustHawk™ significantly reduces water evaporation and increases moisture levels in sand and soil, over significant amounts of time, thereby decreasing dust stir and emissions. The patented formula is a cost-effective and environmentally-friendly tool that maximizes retention of water within the top layer of sand and soil where dust is generated. DustHawk™ decreases the demands for water, saves money and time, and creates healthier work conditions.

DustHawk™ is used in a wide variety of applications including but not limited to: Feedlots, Construction Sites, Work Sites, Mining Operations (both above and below ground), Outdoor Events, Indoor Arenas (i.e. Rodeos, Monstertruck Shows, etc.), Motorcross/ BMX Tracks, and Horse Tracks.

✓ **Reduce Dust**

✓ **Save Water**

✓ **Improve Work Conditions**

✓ **Save Time**

DustHawk™ maximizes water penetration and retention in all types of sand and soil.

DUSTHAWK™

By maximizing the rate and uniformity of water penetration in all types of sand and soil, DustHawk™ reduces evaporation and increases moisture levels across all types of outdoor work environments. A list of the many benefits of DustHawk™ includes:

- ✓ *Conserves water by up to 60%*
- ✓ *Environmentally-safe, non-toxic, and biodegradable*
- ✓ *Reduces maintenance cost of equipment*
- ✓ *Improves community relations*
- ✓ *Reduces fugitive dust*
- ✓ *Enhances driving conditions*
- ✓ *Creates healthier work sites*
- ✓ *Reduces sick leave*
- ✓ *All-natural formula*
- ✓ *Reduces track-out*
